

3/4 of people are diagnosed with lung cancer late due to there often being no signs or symptoms at an early stage.

Targeted Lung Health Checks are designed to **save more lives by finding problems early when treatment could be simpler and more successful.**

Those aged 55 to 74 who are current or former smokers will be invited to a check by their GP.

The Targeted Lung Health Check Journey

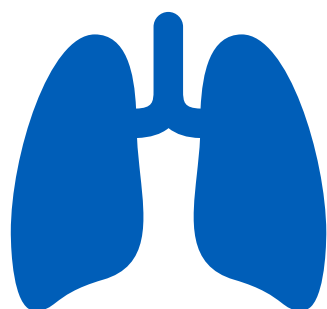

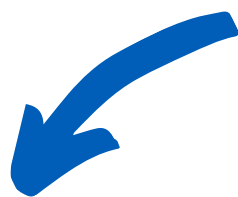

You'll receive a letter in the post from you GP.

A phone call or meeting with a health professional will be arranged to discuss your breathing, overall lung health, lifestyle and family and medical history.

If required you'll be invited to have a quick and painless low dose CT scan of your lungs.

Once we have your results you'll be given the all clear or referred on for treatment.
