

Southwest Prostate MRI Audit

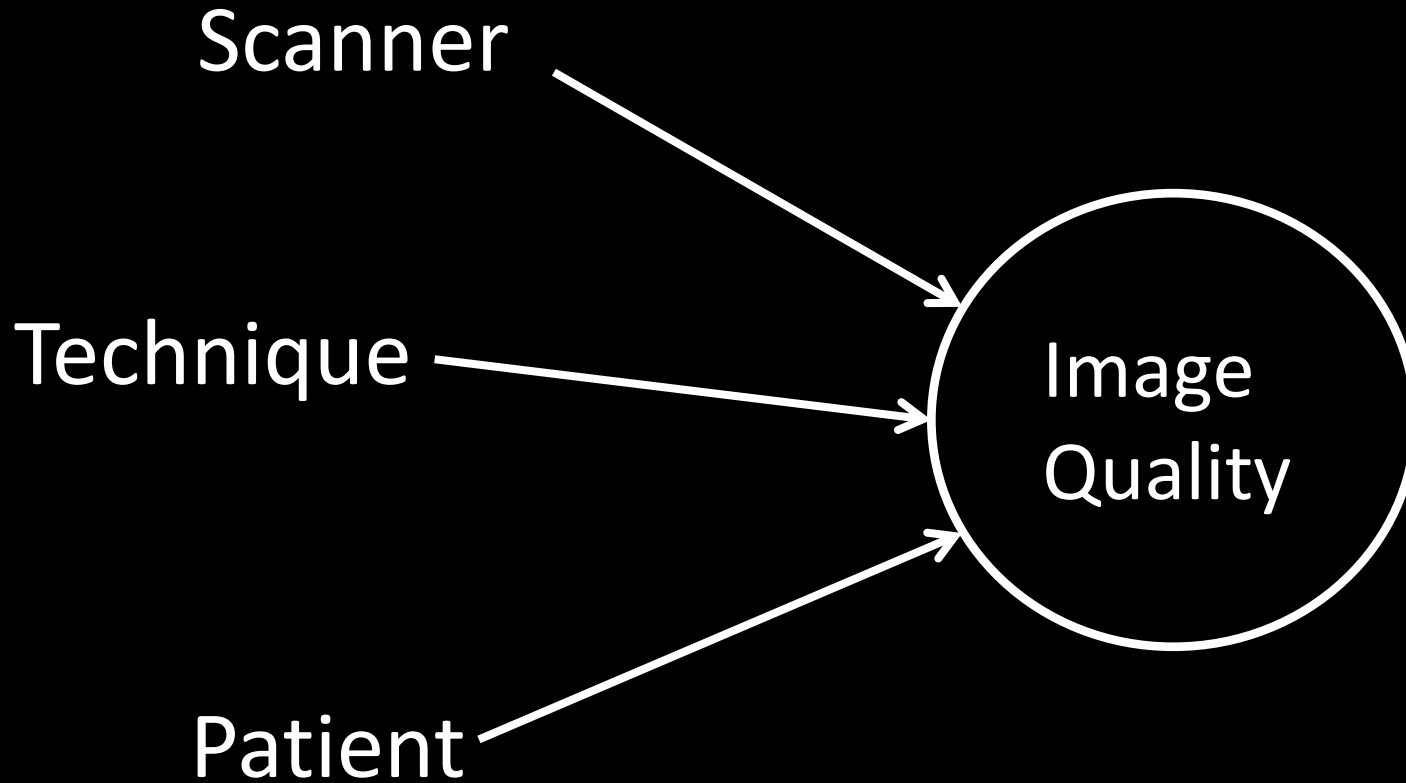

South West Cancer Alliances
Prostate Cancer Diagnostic Pathway Steering Group

NHS England

Dr Paul Burn
November 2018

Introduction

Aim

- To assess:
 - 1) Compliance with recognized technical standards
 - 2) Image quality

Methods

- Each hospital asked to send first 7 consecutive anonymized scans from 1st July
- Imaging assessed by two radiologists
 - one from Cambridge
 - blind to hospital and scanner type

94 scans
from
15 sites

SWAG
and
Peninsular
SSGs

Technical Standards

- PIRADS 2 – 2015
- UK Consensus document - BJUI 2018

The image shows the cover of a BJUI Guidelines document. The BJUI logo (BJU International) is in the top left, and the word 'Guidelines' is in the top right. The main title is 'National implementation of multi-parametric magnetic resonance imaging for prostate cancer detection – recommendations from a UK consensus meeting'. Below the title, a list of authors is provided: Mrishta Brizmohun Appayya¹, Jim Adshead², Hashim U. Ahmed^{3,4}, Clare Allen⁵, Alan Bainbridge⁶, Tristan Barrett⁷, Francesco Giganti^{3,5}, John Graham⁸, Phil Haslam⁹, Edward W. Johnston^{1,5}, Christof Kastner¹⁰, Alexander P.S. Kirkham⁵, Alexandra Lipton¹¹, Alan McNeill¹², Larissa Moniz¹³, Caroline M. Moore^{4,14}, Ghulam Nabi¹⁵, Anwar R. Padhani¹⁶, Chris Parker¹⁷, Amit Patel¹⁸, Jacqueline Pursey¹⁹, Jonathan Richenberg²⁰, John Staffurth²¹, Jan van der Meulen²², Darren Walls²³ and Shonit Punwani^{1,5}. A small 'IP' logo is visible at the bottom right of the author list.

Parameter	Standard	Parameter	Standard
T2 Axial Plane	Axial to patient	DWI FOV	16-22cm
DWI Plane	Axial to patient	DWI pixel size	$\leq 2\text{mm}$
Gd Plane	Axial to patient	Lowest b value	≥ 50
T2W 3 planes small FOV included	Present	Highest b value	≥ 1400 for 1.5T, ≥ 2000 for 3T
T2W Axial slice thickness	3mm	DCE sequence	Present
T2W Axial gap	No gap	DCE slice thickness	3mm
T2W Axial FOV	12-20cm	DCE slice gap	No gap
T2W Axial Pixel Size	$\leq 0.7\text{mm}$	DCE pixel size	$\leq 2\text{mm}$
DWI sequence included	Present	DCE temporal resolution	$\leq 15\text{s}$
DWI Slice thickness	$\leq 4\text{mm}$	DCE duration	$\geq 2\text{mins}$
DWI slice gap	No gap		

Results – standards

- Compliance with 21 standards – mean 63% (range 38-86%)

Peninsular Standards (in blue)

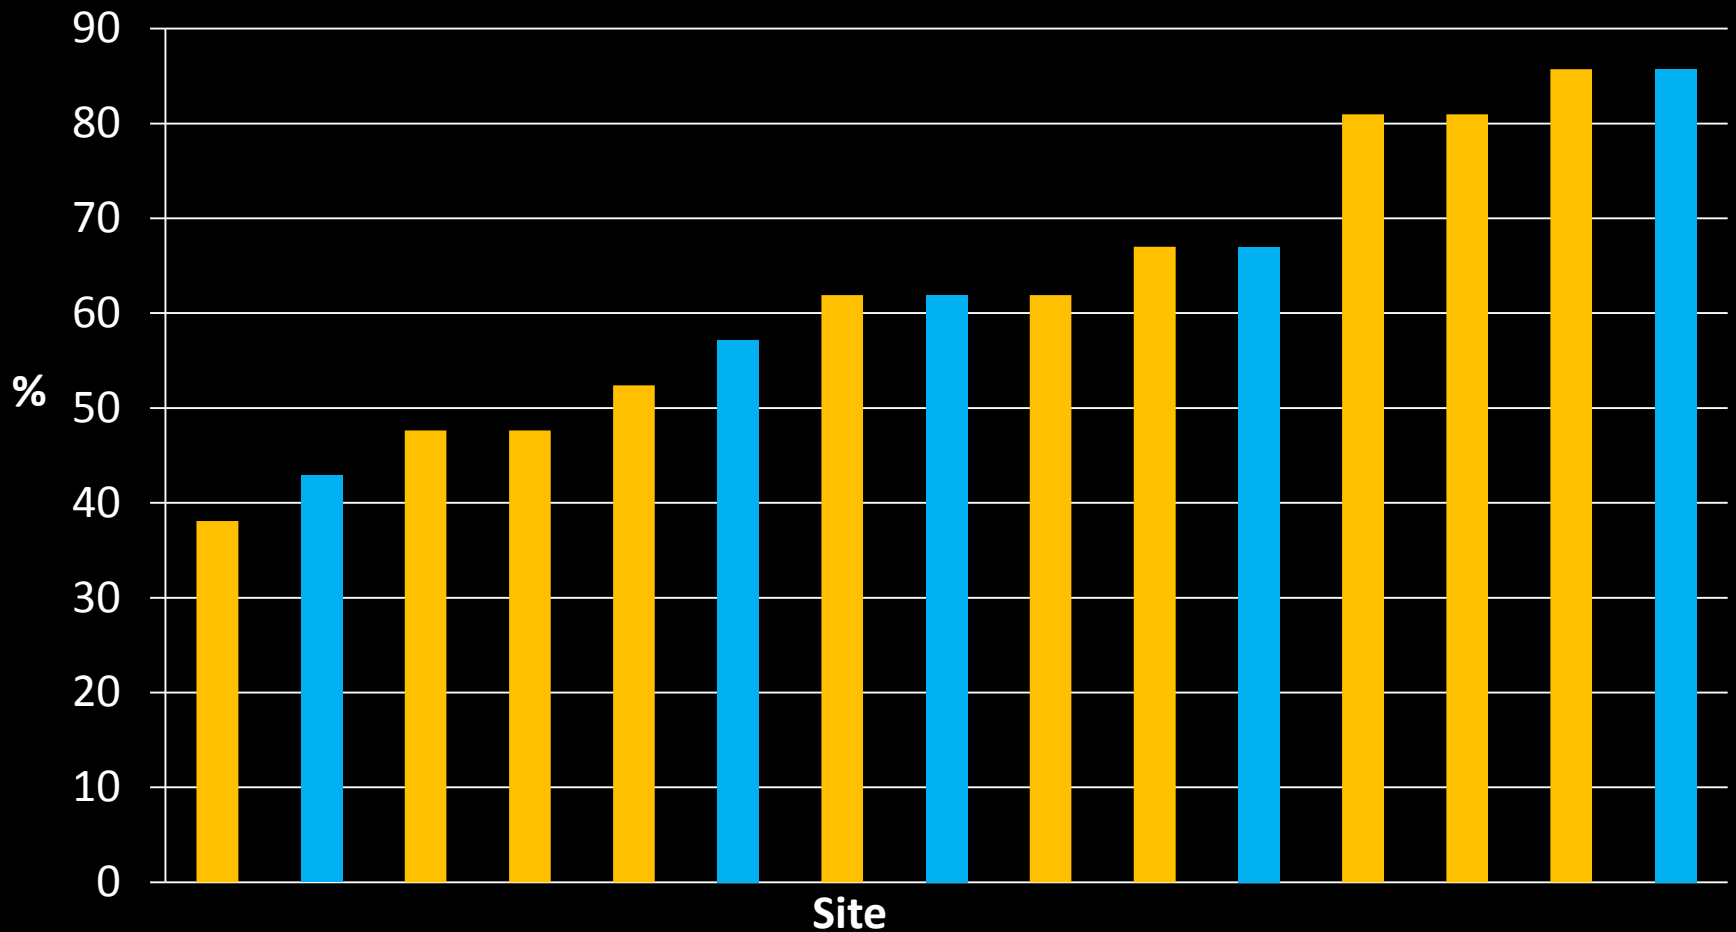

Image Quality

SCORE				
1	2	3	4	5
Very Poor	Poor	Acceptable	Good	Very Good

Image Quality

SCORE				
1	2	3	4	5
Very Poor	Poor	Acceptable	Good	Very Good

Per Patient Results

- Percentage of patients with acceptable or better scans
(score 3 or above)

Per Patient Results

- Percentage of patients with acceptable or better scans (score 3 or above)

Biparametric (T2 and DWI) **59%**

Per Patient Results

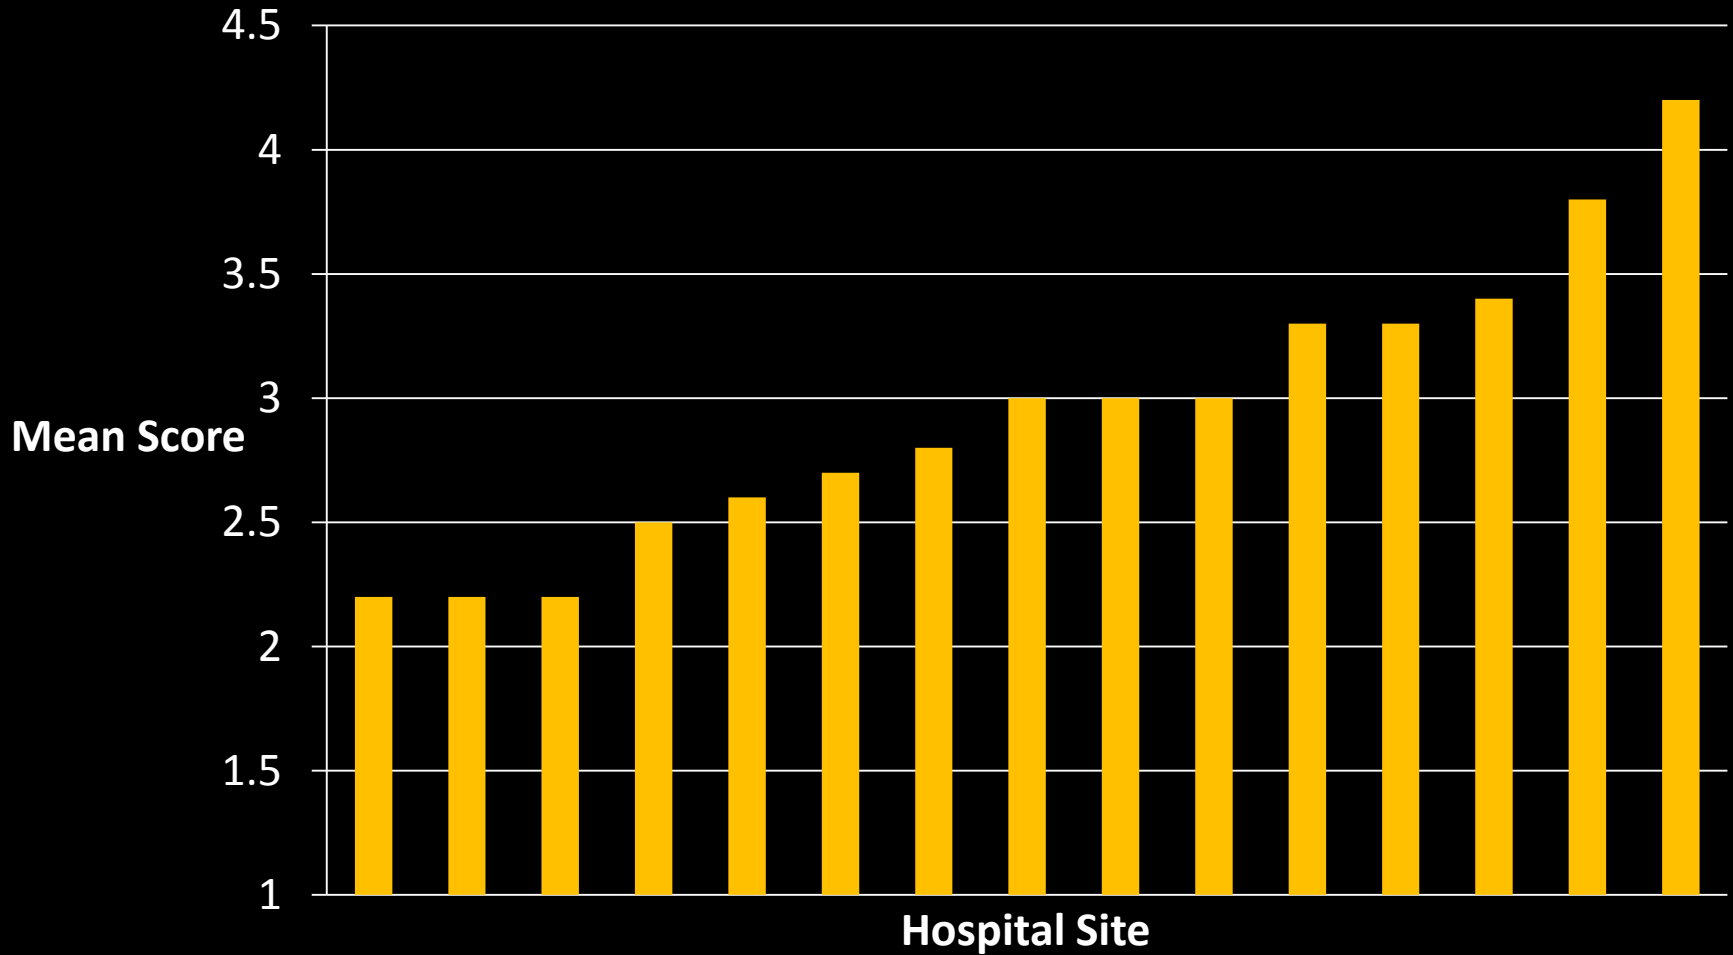

- Percentage of patients with acceptable or better scans (score 3 or above)

Biparametric (T2 and DWI) **59%**

Multiparametric (T2W, DWI and DCE) **56%**
(26% of all patients)

Scanner Age

- Regional Standard *
 - MRI scanner should be <7 years old

*South West Cancer Alliances Prostate Cancer Diagnostic Pathway Steering Group

Scanner Age

Scanner Age

	Oldest 7 Scanners	Newest 7 Scanners
Patients with diagnostic T2W scans (score ≥ 3)	55%	84%

Summary

- Over 40% of patients are not having a fully diagnostic quality scan.
- Fairly wide variation in image quality and compliance with standards
- Feedback to depts may help drive improvements
- Older scanners need replacing
